A special thanks is extended to Elizabeth Porterfield and Nicholas Fuqua from the San Antonio's Office of Historic Preservation for their part in assisting the students of UTSA's College of Architecture. Without their assistance and input, this project could not have been completed.

Accountability is among the key tenants of a culturally healthy and mature society. Be it the monitored conditions of streets, functionality of public utilities, or the policed safety of citizens in their homes, the process of taking account of the physical nature and quality of the built environment is important to the informed planning process of short and long-term community sustainability.

Differing from the duties of government to see that municipal infrastructure works and is maintained, private property owners bear a responsibility to care for homes and yards as contribute to the character and integrity of any neighborhood. In light of this civic duty and in the name of community cooperative accountability, surveys of properties are undertaken to define the cultural significance and condition of historic identifiable districts of cities in the name of public awareness and in order to perpetuate the sense of shared civic pride.

In an effort to establish a baseline of cultural relevance and a foundation for the advocacy of the protection and preservation of the distinct Shearer Hills Neighborhood, this survey was undertaken as a volunteer educational research effort by the UTSA College of Architecture working with the City of San Antonio Office of Historic Preservation. With the collaborators of this research effort established, the following survey findings are set forth as a measure of what defines Mid-century Modern American suburban landscapes and domestic housing (within the context to San Antonio), as represents the genesis of much of the nation's contemporary residential identity—an identity that deserves further research and documentation as this study intends to establish.

## Geographic and Planning Characteristics of Shearer Hills and North Central San Antonio

Previously farm and pasture land, the North Central area of San Antonio primarily developed between 1910 and 1960, with development climaxing during the post-World War II period. These suburbs inside Loop 410 still exemplify the “American Dream” homeownership ideal. Today, younger professionals join long-time residents in rehabilitating bungalows, prairie style homes, and “rambling” ranch homes, most of which have now reached an age to be considered historically significant. (San Antonio Planning Department)

The North Central neighborhoods are located at a distinct juncture in time and urban development, portraying two distinct urban settlement patterns. South of Basse Road, the community is characterized by an early 20th century street grid pattern with small residential lots. This traditional neighborhood pattern was designed for pedestrian comfort and social intimacy. North of Basse Road, the area takes on a post-World War II suburban character that catered to an automobile-oriented American society. These residential areas are characterized by larger lot subdivisions using serpentine or curvilinear streets, like those found in Shearer Hills. These neighborhoods are bordered by independently-owned businesses and commercial centers along major thoroughfares, in Shearer hills these commercial entities are found on the north and west boundaries of the sub-division along Oblate and San Pedro Avenue respectively. Post War public works projects such as the San Antonio Airport, the completion of Loop 410 and later US Highway 281 led to regional commercial development along the freeways, just beyond the boundaries of these neighborhoods.

## Post World War II Development: Automobile-centric, Serviceman-driven

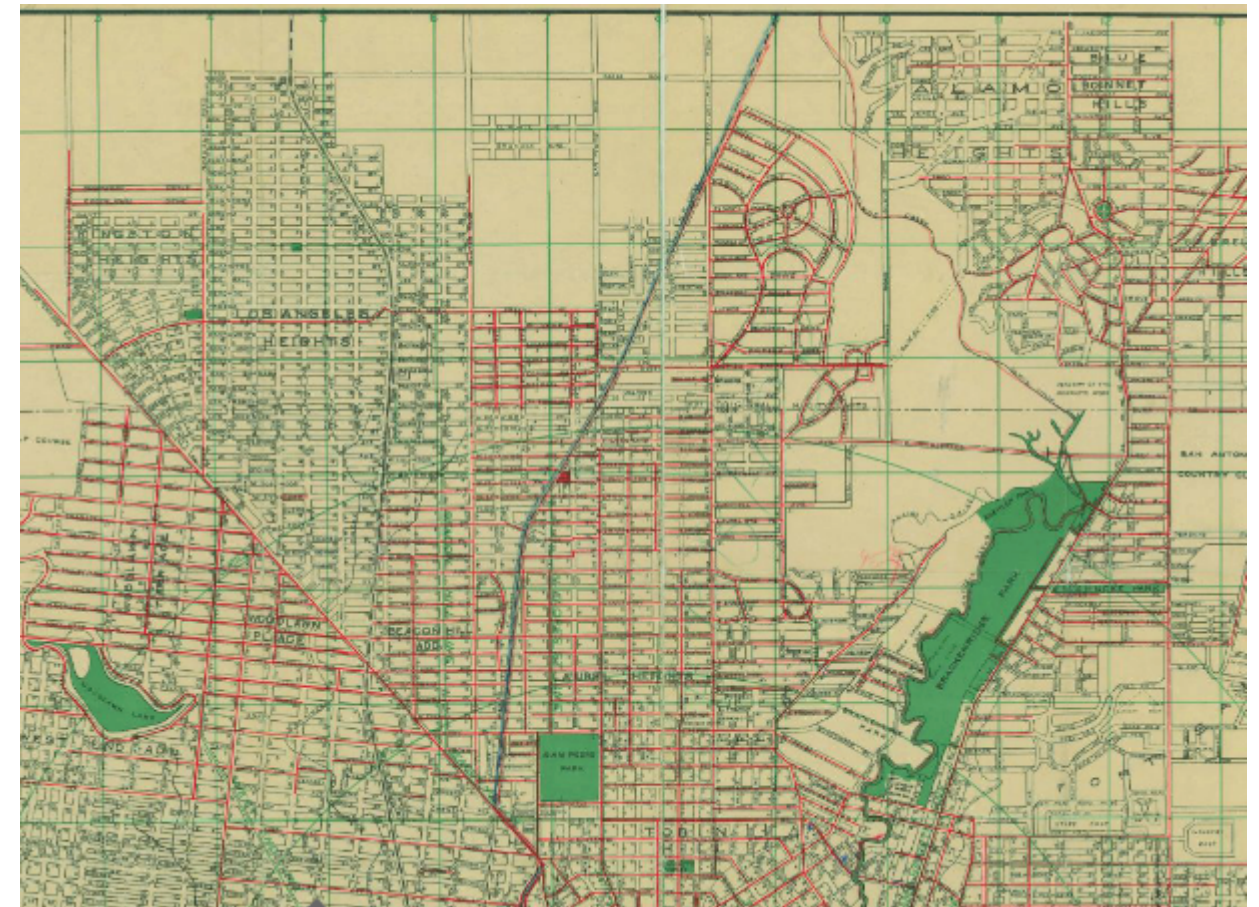

A major post-War infrastructure project, the National Interstate Highway System, was planned during the course of the war in response to the military’s need to transport men and materiel quickly and efficiently across the country. The plan was to link most of the state capitals and a large majority of the cities with populations of 40,000 or more by easily traversed modern roadways. In 1949, Interstate Highway 10, locally known as the San Antonio Urban Expressway, was opened. From 1940 to 1950, the City of San Antonio doubled in size from the original 36 square miles to 67.8 square miles. By 1950, San Antonio was the headquarters of the largest military establishment in the United States. Approximately 50,000 military personnel were present in San Antonio at the military bases. (Handbook of Texas online) Also known as a commercial and financial center, San Antonio developed a thriving post war economy based on agricultural trade, petroleum, medical services, wholesale distribution and mining. The moderate sunny climate attracted many tourists and new residents, and San Antonio became known as “The Sunshine City.”

The 1954 San Antonio City Directory provides a literary snapshot of the North Central San Antonio during this time. Olmos Park, which consisted of 1,010 acres, had “beautiful trees, picnic grounds, a skeet range and shady walks.” Oblate Drive was the northern city limits. San Pedro Avenue, Blanco Road, and McCullough were lined with gas stations, restaurants, a few “drive-in” restaurants, food stores, ice houses, and other neighborhood businesses. Some lumber companies and building materials stores were located in the 4300 block of McCullough and the 3400 block of San Pedro Avenue. El Montan Motel was a tourist court on Highway 281 on the outskirts of the city (now 6806 San Pedro Ave.) Only a few houses existed on Jackson Keller between McCullough and Ave Maria. Jones-Maltsburger Road stretched beyond the city limits extending past Oblate.

In response to the housing needs of returning servicemen, with many marrying and starting new families, the Federal Home Administration financed 4.5 million suburban homes in the 1950s. The GI Bill of Rights allowed veterans to buy houses with no down payments. By 1956 House Beautiful reported that 60 percent of American families owned their own homes. As a home to so many returning servicemen as well as many more on active-duty, San Antonio’s real estate market was well-positioned to respond to this new national housing trend. One of the leaders in this early post war development was H.J. Shearer, who was an active investor in the automobile industry and also engaged in the purchase and development of real estate. A native of Pennsylvania, Shearer began his career in San Antonio real estate in 1917, purchasing older homes and remodeling them into “modern” apartments. In 1922 he developed the Magnolia Drive Addition and Woodlawn Terrace, neighborhoods south of Basse Road.

North Shearer Hills was platted by H. J. Shearer and recorded on June 16, 1947. (Pfeiffer) The North Shearer Hills Neighborhood Association Neighborhood Plan recalled:

“As the city continued to grow, the need for additional residential sites led developer H. J. Shearer, to seek deeds to the area now known as Shearer Hills. It is reported that many of the streets were named after girl friends of his daughter (e.g. Anne Lewis, Susan Carrol, Veda Mae, etc.). As recently as 1949, the area was in nearly open country. Fields were evident east and north of the Oblate Fathers Seminary and east of San Pedro..... Utilities were limited; the water supply was a large pressure tank located in the vicinity of Jackson Keller and Ave Maria, just at the foot of the hill.... Septic tanks were used until the area was annexed by the City of San Antonio.”

Map of San Antonio’s northern city limits as of the late 1930’s.

## Example of the Survey Form

### PROPERTY IDENTIFICATION

San Antonio Office of Historic Preservation

Address: \_\_\_\_\_

Current Use:  Domestic  Commercial  Industrial  
 Educational  Religious  Civic  Other: \_\_\_\_\_

Year Built (ca.): \_\_\_\_\_

Resource Type:  Building  Object  Site  Structure

### ARCHITECTURAL EVALUATION

Style:  Ranch  Neocolonial  Minimal Traditional  
 Split Level  Other: \_\_\_\_\_

Influence: \_\_\_\_\_

Integrity:  Low  Medium  High

Plan Shape: \_\_\_\_\_

Front Setback:  10ft  10-20ft  20-30ft  30ft+

Detached Garage:  Yes  No No. of Stories: \_\_\_\_\_

Foundation Type:  Slab  Pier/Beam  Perimeter Wall  
 Not Visible  Other: \_\_\_\_\_

Structural System:  Wood Frame  Load Bearing Masonry  
 Structural Clay Tile  CMU  Other: \_\_\_\_\_

Exterior Wall Material:  Wood  Asbestos  Brick  Tile  
 Stone  Stucco  CMU/Concrete  Hardiplank  Metal  
 Vinyl/Aluminum  Other: \_\_\_\_\_

Primary Roof Type:  Mansard  Shed  Gambrel  Monitor  
 Flat  Flat w/ Parapet  Hip on Gable  Gable w/ Parapet  
 Hipped  Front Gable  Gable on Hip  Cross Gable  
 Cross Hipped  Side Gable  Irregular  Pyramid  
 Other: \_\_\_\_\_

Roof Material:  Tile  Metal-Corrugated  Shingle-Wood  
 Modern Membrane  Built-up  Metal-Standing Sm.  
 Shingle-Composition  Not Visible  Other: \_\_\_\_\_

Chimney Material:  Brick  Stone  CMU  Stucco  
 Other: \_\_\_\_\_

Porch Type:  Full  Front Gable  Inset  Side Gable  
 Shed  Attached  Wrap-around  2-Story  Enclosed  
 Screened  Balcony  Arcade  Not Visible  None  
 Other: \_\_\_\_\_

Porch Features:  Balustrade  Brackets  Classical Cornice  
 Spindework  Brick  Wrought Iron Posts  Wood Posts  
 Turned Columns  Classical Columns  Piers-Battered  
 Piers-Wood  Piers-Stone  Piers-Brick  Other: \_\_\_\_\_

Additions/Alterations: \_\_\_\_\_

General Notes: \_\_\_\_\_

Survey By: \_\_\_\_\_ Date: \_\_\_\_\_

Original Windows:  Yes  No Original Doors:  Yes  No

Window Type:  Casement  Arched  Vinyl/Aluminum  
 Wood Double Hung  Louvered  Horizontal Sliding  
 Fixed/Picture  Not Visible  Other: \_\_\_\_\_

Secondary Window Features:  Arched  Wrap-around  Bay  
 Casement  Clerestory  Aluminum/Vinyl Sash  Screened  
 Awning  Not Visible  Other: \_\_\_\_\_

### LANDSCAPE EVALUATION

Built Landscape Features:  Retaining Wall  Planter  Ramp  
 Patio/Terr.  Front Yard Fence  Lamp Post  Other: \_\_\_\_\_

Fence:  Iron  Wood  Masonry  Chain-link  
 Other: \_\_\_\_\_

Driveway:  Asphalt  Concrete  Brick  Ribbon  Gravel  
 Other: \_\_\_\_\_

Heritage Trees:  Yes  No

Outbuildings: \_\_\_\_\_

Natural Landscape Features: \_\_\_\_\_

### Principle Elevation

Oblique

**Asphalt shingles:** Roofing and wall cladding units made from asphalt-saturated vegetable or mineral fiber felt surfaced with mineral or ceramic granules on the face exposed to weather. Early units took the form of individual shingles; later units generally took the form of strips notched at the bottom edge to provide a covering resembling the configuration of wood, slate or tile shingles. Sometimes the material was embossed with patterns simulating wood or slate. Individual asphalt shingles were invented in 1903, and the first multi-tab shingles were invented in 1906.

**Awning:** A lightweight, roof-like covering – often made of canvas on a metal framework but also made of thin metal or plastic, with or without a frame – projecting from a wall, often above a window or door, to provide shade and protection from rain. Some awnings are fixed, and some awnings can be folded upward against a building.

**Awning window:** A window with one or more sashes – either top-hinged or picoted near the tops of their stiles – that open outward at the bottom.

**Batten:** In relation to the exterior cladding, a relatively narrow strip applied to cover a joint between adjacent boards. Also used in panel and batten siding.

**Balustrade:** A railing composed of balusters (one of a series of short vertical posts, often ornamental, used to support a rail.

**Bay window:** A projecting form containing windows that rises from the ground or from some other support, such as a porch roof; see also oriel.

**Board and batten siding:** Wood siding consisting of plywood panels with wood battens, applied over the vertical joints between them.

**Built-up roof:** A roof surface, usually used on flat or nearly flat roofs, that generally consists of multiple layers of bitumen-saturated felt adhered together with coatings of hot bitumen and surfaced with either a cap sheet – a saturated felt surfaced with mineral granules – or gravel installed in a heavy layer of bitumen. The bitumen can be either asphalt or coal tar. Sometimes cold bitumen or another adhesive is used.

**Butterfly roof:** An inverted gable roof in which two sloping planes, each pitching downward from the eaves, meet in a valley.

**Canopy:** In relation to buildings, a fixed roof-like projection extending from a building, often of cloth on a lightweight frame and often with thin supports on the end opposite the building, that provides shelter from the weather. Canopies frequently shelter a path from a doorway to a street.

**Cantilever:** A structural element supported only at one end or the portion of a structural element extending past the last support. In the case of a horizontal beam or slab, the unsupported portion of the element that projects past a supporting column, wall or beam.

**Carport:** A roofed shelter for an automobile open on one or more sides.

**Casement window:** A window with one or more side-hinged sashes that open inward or outward.

**Clerestory window:** A window in the upper portion of a wall of a tall space.

**Concrete:** A building material consisting of sand or other fine aggregate and gravel or other large aggregate bound together by adhesive paste of cement and water. Formable when installed, concrete sets into a dense, rock-like mass. Concrete may contain additional ingredients.

**Concrete block:** A masonry unit, either solid or with vertical hollow cores, made of concrete. Concrete block, available widely from the earliest years of the 20th century, can have either a plain smooth surface or a three-dimensional decorative surface. The most common concrete block is nominally 16 inches long x 8 inches high x 8 inches deep.

**Cornice:** A projecting molding that tops the elements to which it is attached; used especially for a roof or the crowning member of an entablature, located above the frieze.

**Corrugated glass:** A sheet of glass molded with a cross section in the form of a sine wave that can support more load and diffuses light more widely than flat glass of the same thickness. A method of making corrugated glass was patented in the United States in 1898.

**Courtyard:** A roofless exterior space generally bordered on three or four sides by buildings or walls.

**Deck:** In relation to Modern houses; a platform, generally adjacent to a building, intended to provide outdoor living space.

**Exposed aggregate finish:** A concrete finish in which the large aggregate – either typical washed gravel or more decorative crushed stone – is exposed by removal of the cement and fine aggregate from the surface of the concrete by brushing or pressure washing before the cement has set or by acid washing or light abrasive blasting after the concrete has cured.

**Extended end walls:** Freestanding, full height walls that extend beyond the corner of a building into the landscape.

**Fixed sash:** A window sash that is not operable.

**Flagstone:** A relatively thin stone unit, generally split from hard, stratified sedimentary rock, used as paving. This is also referred to as a flag.

**Flat roof:** A roof either with no slope, called dead flat, or with only enough slope, generally one-quarter inch per foot, to cause water to run to drains, gutters or scuppers.

**Flash range brick:** Courses or patterns of multicolored brick veneer. Folding door or wall: See accordion door.

**Glass block:** A generally translucent, non-load bearing glass unit. Most glass block used in Modern houses are hollow, having a cavity with a partial vacuum; some glass block are solid glass. Although glass block were exhibited at the 1893 Columbian Exposition in Chicago, they were most widely produced starting in the 1930s.

# Mid-Century Modern Architecture Terminology and Survey Form

**HardiePlank:** The brand name of an exterior siding product made from fibrous cement and is a lap siding element. The name is now used in the building industry generically in identifying any fiber cement lap siding.

**Hopper window:** A window with one or more sashes – either bottom hinged or horizontally pivoted near the bottom of their stiles – that opens inward at the top.

**Horizontal sliding window:** A window with side-by-side sashes set in adjacent parallel grooves or tracks in which one or more sashes open by sliding horizontally. This is also referred to as a sliding sash window.

**Jalousie window:** A window sash or framed opening containing narrow, overlapping, pivoting glass slats that can be opened or closed in unison, often by use of a crank. The overlapping slats shed water when they are open. Jalousie slats sometimes substitute for the glazing in storm doors. A patent for a jalousie was issued in 1947, although as the application was made in 1941, the element may have been available earlier.

**Louver:** A framed element containing a series of sloping slats, overlapping in the vertical plane, either fixed or pivoted, that allows passage of light and/or air and restricts passage of precipitation.

**Patio:** A generally paved, unroofed area adjacent to a building, constructed at grade, and designed to provide outdoor living space.

**Pergola:** An ornamental structure, generally consisting of parallel rows of columns supporting beams or trelliswork, designed to accommodate climbing plants.

**Picture window:** A large window with a fixed sash or with glass glazed directly into the frame, often placed to provide an attractive exterior view, usually without muntins or mullions.

**Pivot window:** A window with a sash that opens by pivoting either vertically near the centers of its stiles or horizontally near its rails.

**Plate glass:** Clear glass, generally thicker than normal window glass, ground and polished on both sides to achieve optimum clarity and produced in large sheets for glazing curtain walls and window walls. Polished plate glass was available in the 1870s. Modern houses with floor-to-ceiling glass were glazed with polished plate glass, which is no longer manufactured. Damaged and missing plate glass is often replaced with float glass.

**Plywood:** A rigid panel generally consisting of three or more sheets of wood veneer glued together with the grain of each sheet perpendicular to that of adjacent sheets. Some plywood has a core of thicker wood, called a lumber core, and the thickness and orientation of plies can vary. Plywood is available in much larger sheets than solid lumber. Softwood plywood was widely available after the first decade of the 20th century.

**Pocket door:** A sliding door that is opened by sliding it into a slot in the edge of the wall opening.

**Porcelain enamel panel:** A thin panel used for exterior cladding or interior finish consisting of a section of sheet metal, generally steel, surfaced with a vitreous coating, generally colored. These panels were first available in the 1920s.

**Porch:** A roofed, generally open-sided, above-ground-level platform attached to a building, usually in front of a doorway.

**Quarry tile:** A dense, unglazed, flat clay tile, generally 6 inches square or larger on the face and ½ to ¾ inch thick that is used for paving floors, walls and roofs.

**Rail:** In relation to doors, windows and paneling; a horizontal wood framing member of a door, sash or wall panel.

**Recessed lighting fixture:** A lighting fixture inserted into the ceiling so that the lower edge of the fixture is flush with the ceiling plane.

**Reinforced concrete:** A composite material made of concrete, which is able to resist compression forces, and steel – usually in the form of rods, bars or mesh – or another material that is able to resist tension forces. Reinforced concrete is most often employed as a structural material, but it can be used for cladding and for decoration. It has been used in the United States since the last years of the 19th century.

**Reveal:** A continuous groove between adjoining planar surfaces. In Modern architecture, reveals were often used at edges of building elements, such as walls and cabinets, to create the illusion that the elements are planes, or solid objects, floating in space rather than attached to adjacent building elements. This is also seen at the continuous recess between a door or window frame and the surface of the adjacent wall.

**Ribbon window:** A horizontal band of fixed, or operable, sash separated by mullions. This also refers to a horizontal band of lights separated by mullions or butt-joint glazed.

**Roman brick:** A long, thin brick nominally 12 inches long by 4 inches deep by 2 inches high. Although actual brick dimensions vary, the brick are commonly 1-½ inches high. Masonry of Roman brick with thin joints emphasizes horizontally.

**Sash:** A frame in a window that is separate from the window frame, generally constructed of stiles and rails into which glass is installed. Sash can be fixed or operable.

**Screen door:** A secondary door, generally thinner and lighter than the primary door in the same doorway, which has one or more large openings covered with small mesh screen to exclude insects but allow air circulation.

**Shed roof:** A roof with only one sloping plane.

**Sidelight:** A glazed sash adjacent to a door, generally fixed.

**Simulated stone masonry:** An exterior cladding material simulating masonry construction attached as veneer over existing masonry or framing. PermaStone was patented in 1929 by a company of the same name. Other comparable forms of simulated stone cladding followed shortly thereafter. Simulated stone was available in two forms: siding manufactured off site in molds and applied somewhat like real stone and cement-based materials applied in layers on site. The term “permastone” has come to be used generically to describe all varieties of synthetic materials designed to resemble stone. Other common trade names include Formstone and Rostone.

**Skylight:** A glazed opening in a roof that provides light to the interior space below. Skylights in Modern structures are often low-rise plastic bubbles. Some skylights open to provide ventilation.

**Sliding door:** A door generally supported and guided by tracks or guides at the top and/or bottom that is opened and closed by sliding it sideways.

**“Speed” brick:** Colloquial name given to a brick type that is slightly larger than the standard 8” x 4” x 2 ¼” brick size. Bigger “speed” bricks lessen the amount of mortar and bricks used which in turn reduces cost and typically shortens the construction process.

**Stoop:** An elevated platform sometimes accessed by a set of steps, at the entrance to a building.

**Storm door:** A secondary exterior door – generally lighter and thinner than the primary door, generally glazed and generally located to the outside of the primary door – that reduces air infiltration and protects the opening from weather.

**Storm window:** A secondary sash installed within the window frame outside the primary sash or outside the window to reduce air infiltration and to provide additional protection from the weather.

**Stucco:** A water-resistant finish material, generally consisting of Portland cement, sand and water that was often applied to the exterior walls of Modern buildings including houses. Stucco on buildings of earlier periods may not have contained Portland cement.

**Terrace:** A paved area, sometimes raised, adjoining a building or paved roof area used for sitting and light activity.

**Terrazzo:** Traditionally hard, smooth, or polished flooring made of marble or other stone chips embedded in a cement binder with a ground and polished surface. Terrazzo can also be cast in molds for stair treads, baseboards and other elements. It was widely used beginning in the early 20th century, at first installed from wall to wall in broad expanses and later installed in smaller panels separated by thin metal strips to control cracking. In the third quarter of the 20th century, a similar but more resilient material bound with epoxy resin rather than with cement became available.

**Textured glass:** Glass that has a three dimensional pattern on one surface. The glass can be clear or have varying degrees of translucency.

**Transom light:** A window above a doorway with either a fixed or operable sash or a light.

**V-channel vertical wood siding:** Wood siding consisting of vertical boards with chamfered edges installed adjacent to each other, forming V-shaped joints.

**Waffle slab:** A two-way floor or roof system consisting of a reinforced concrete slab poured with integral joists or ribs in two directions beneath it. The system has a waffle-like pattern when viewed from below.

**Window wall:** A nonbearing wall composed primarily of windows.

**Wing wall:** A building wall that extends beyond the building itself. Also, a wall extending from another wall for which it serves as a support and which also, in some cases, serves as a retaining wall. If the wall is a free standing extension of a wall in the same place, it is called an extended wing wall.

**Wire glass:** Sheet glass reinforced with embedded wire mesh, generally in a hexagonal, square, or diamond pattern to prevent shattering. The glass can be clear, frosted or patterned. Patents for making wire glass were issued beginning in the early 1890s.

# Barbara Drive

HOUSE SURVEYS

MAP  
OF  
EAST SHEARER HILLS

**PROPERTY IDENTIFICATION**

San Antonio Office of Historic Preservation

Address: 102 Barbara Drive  
San Antonio, TX 78216  
Year Built (ca.): 1959

Current Use: Domestic Commercial Industrial  
Educational Religious Civic Other  
Resource Type: Building Object Site Structure

**ARCHITECTURAL EVALUATION**

Style: Ranch Neocolonial Minimal Traditional  
Split Level Other:  
Influence: None  
Integrity: Low Medium High  
Plan Shape: Offset  
Front Setback: 10ft 10-20ft 20-30ft 30ft+  
Detached Garage: Yes No No. of Stories: 1  
Foundation Type: Slab Pier/Beam Perimeter Wall  
Not Visible Other:

Original Windows: Yes No Original Doors: Yes No  
Window Type: Casement Arched Vinyl/Aluminum  
Wood Double Hung Louvered Horizontal Sliding  
Fixed/Picture Not Visible Other: Double Hung  
Secondary Window Features: Arched Wrap-around Bay  
Casement Clerestory Aluminum/Vinyl Sash Screened  
Awning Not Visible Other:

**LANDSCAPE EVALUATION**

Built Landscape Features: Retaining Wall Planter Ramp  
Patio/Terr. Front Yard Fence Lamp Post Other: Not Visible  
Fence: Iron Wood Masonry Chain-link  
Other:  
Driveway: Asphalt Concrete Brick Ribbon Gravel  
Other:  
Heritage Trees: Yes No  
Outbuildings: Trellis  
Natural Landscape Features: Uphill slope in front.

Structural System: Wood Frame Load Bearing Masonry  
Structural Clay Tile CMU Other:

Exterior Wall Material: Wood Asbestos Brick Tile  
Stone Stucco CMU/Concrete Hardiplank Metal  
Vinyl/Aluminum Other:

Primary Roof Type: Mansard Shed Gambrel Monitor  
Flat Flat w/ Parapet Hip on Gable Gable w/ Parapet  
Hipped Front Gable Gable on Hip Cross Gable  
Cross Hipped Side Gable Irregular Pyramid  
Other:

Roof Material: Tile Metal-Corrugated Shingle-Wood  
Modern Membrane Built-up Metal-Standing Sm.  
Shingle-Composition Not Visible Other:

Chimney Material: Brick Stone CMU Stucco  
Other:

Porch Type: Full Front Gable Inset Side Gable  
Shed Attached Wrap-around 2-Story Enclosed  
Screened Balcony Arcade Not Visible None  
Other: Courtyard enclosure

Porch Features: Balustrade Brackets Classical Cornice  
Spindlework Brick Wrought Iron Posts Wood Posts  
Turned Columns Classical Columns Piers-Battered  
Piers-Wood Piers-Stone Piers-Brick Other: Not Visible

Additions/Alterations: Trellis and stucco walls for courtyard.  
Garage addition on side. Infill of original garage. Extended driveway.

General Notes: Safe Route Flood light pole in front yard.

Survey By: Barry Reyna and Adam Martinez Date: 12/3/2013

Principle Elevation

Oblique

The following statistics set for the Shearer Hills neighborhood lay out some of the qualities that unify the neighborhood, with hopes to encourage further investigation of these residences. The qualities shown are integrity, architectural style, exterior materials, landscape features, and heritage trees. This characteristic, along with others, play a critical role in historic neighborhoods, in that each must be seen throughout at a neighborhood scale.

The integrity of these residences is another critical aspect of historic neighborhoods. The survey of Shearer Hills analyzed the integrity by putting each residence in three categories; high, medium and low. The highest quality represents residences that have a high integrity of not only the maintenance of the house, but has also maintained the historic qualities. For example, a ranch style house has maintained the ranch style design throughout any renovations or additions through the life of the house.

The AIA's Guide to Historic Preservation states that the integrity of the structure can dramatically change its historic value, in that if it is low, the historic value is drastically reduced, and is at a higher risk of being lost permanently. This is applied at the neighborhood scale as well, which emphasizes the importance of striving to maintain the historic value for each residence. As you will see in the following pages, Shearer Hills has a strong balance throughout the neighborhood for each of these characteristics, and can be a viable candidate for a historic neighborhood.

## Further Investigation for Shearer Hills

The survey of the Shearer Hill neighborhood provides a valuable precedent for recording, studying and appraising the architecture of the mid-century modern suburban home. The work in this volume contributes a threshold for future research as the city of San Antonio seeks to identify significant architectural communities and address coming of age historic buildings.

Delving deeper into the Shearer Hills neighborhood uncovered treasures of mid-century modern suburban housing. By assigning some typology and identifying classic examples of ranch style or neo-colonial and other designed abodes, we hope to provide the community and the city preservation offices with a tool that will help them to articulate and prioritize tasks associated with the conservation and maintenance of these notable homes.

Further investigation might assist this endeavor in the form of preservation and rehabilitation guidelines which may be interpreted specifically for this neighborhood with graphics and case study examples which might be used as tools to communicate procedures and best practices to the community as their homes approach an age where intervention may become necessary. The challenge to instigate discussions with mid-century Modern neighborhoods regarding the historic designation prospects and consequent design guidelines can be alleviated with proper tools to aid communication. Fortunately, there are several examples of other communities who have paved the way and can be drawn on for precedence of approach.
